Don't Be Afraid of Clinical Trials They Could Improve the Quality of Your Care

Progress in cancer treatment results from researching new procedures and drugs through clinical trials. If you are thinking about participating in a clinical trial, you may feel nervous or unsure. This is normal. But the more you know about what's involved and what to expect, the more comfortable you'll be about your decision. This fact sheet answers some common questions about clinical trials.

“What is a clinical trial?”

A clinical trial is a research study that evaluates a new treatment. In most cases, the new treatment has already shown promise of being an improvement over the standard treatment. Many clinical trials are tests to see how much better a new treatment works than the current one.

People in clinical trials are among the first to receive new treatments. They are also closely monitored by doctors and other researchers.

“How do I find a clinical trial?”

Ask your oncologist. He or she is most familiar with your case and can tell you if there are clinical trials for someone with your type and stage of cancer. You can also find listings of clinical trials through resources such as:

- National Cancer Institute's Cancer Information Service
1-800-4-CANCER or www.cancer.gov/clinicaltrials
- American Cancer Society's Clinical Trials Matching Service
1-800-303-5691 or www.cancer.org/clinicaltrials

“How do I know if a clinical trial is right for me?”

Learn as much as you can. Before you sign up for a clinical trial, make sure you understand exactly what treatment is being offered and how it differs from the standard treatment available for your cancer. Ask about new or possibly unique side effects of the treatment that is being studied. This information will help you make an informed decision.

fact sheet

Understand what your insurance covers and doesn't cover. Many medical insurance companies do not include coverage for doctors, treatments or other expenses related to clinical trials. While the clinic or hospital running the trial will cover the cost of any drugs under study, you might need to advocate for reimbursement from your insurer for coverage for the other costs associated with the trial.

Learn about your rights and protections. People who take part in clinical trials have rights and protections to make sure their privacy and well-being are maintained. For example, all study participants must sign an "informed consent" document. This document states that they have a full knowledge and understanding of the study, and of any possible risks and benefits. Participants also have the right to drop out of any clinical trial at any time. If you have any concerns about safety, talk to someone on the clinical trial staff.

CancerCare Can Help

Clinical trials offer many advantages to people going through cancer treatment. You should get as much help and information as possible when considering a clinical trial, but ultimately, the decision is yours. CancerCare's professional oncology social workers can help you sort through any practical and emotional concerns you may have about joining a clinical trial.
